

SEP 17: Issuer Account Funding (created 14/12/2018)

- Account funding via issuer is a method for an issuer to easily fund a user's account.
- Proposes a mechanism for sponsored reserves, allowing issuers to cover the reserve requirements for new accounts and trustlines created during deposits. Outlines different scenarios and error handling, facilitating user onboarding and reducing friction for new users.
- Issuer wallets are pre-funded with XLM to facilitate account creation and asset transference, important to onboard billions of people who have not learned about Stellar
- Part of SPACs means ICO fundraising efforts are also for liquidity/operational bridges! We as Stellar beta testers are also helping to fund wallets for the global population!
