

SEP 24: Hosted Deposit & Withdrawal (created 18/9/2019)

- This SEP defines the standard way for anchors and wallets to interact on behalf of users.
- Defines a standardized API for web-based wallets to interact with Stellar, enabling web applications to initiate authentication requests, sign transactions, and manage accounts securely. Covers aspects like account funding, transaction statuses, and error handling.
- Receiver must always pass KYCAML
- You can direct payment to other wallets you own (also muxed accounts).
