SEP 37: Address Directory API (created 4/9/2020 by OrbitLens=Khazarian cockroach)
- Accounts spotted in scam schemes can be identified/blocked only as a result of joint community effort, Directory API to prevent transfers to/ from addresses marked as malicious.
- EMILY'S SUMMARY: Appears to be coordinated Khazarian effort to blacklist legitimate anchors and developers from onboarding into Stellar, now could be used against them (Art of War). Security Concerns "N/A" is false = proof that quality of Directory depends entirely on quality of inputs/influencers (centralized).
